This project-oriented facilities design and material handling reference explores the techniques and procedures for developing an efficient facility layout,

and introduces some of the state-of-the-art tools involved, such as computer simulation. A "how-to," systematic, and methodical approach leads readers through the collection, analysis and development of information to produce a quality functional plant layout. Lean manufacturing; work cells and group technology; time standards; the concepts behind calculating machine and personnel requirements, balancing assembly lines, and leveling workloads in manufacturing cells; automatic identification and data collection; and ergonomics. There is an increasing interest in environmental issues. Hydrogeochemistry is very important from viewpoint of environmental impact assessment. Both surface water and ground water are used as sources of water for many purposes. This sub-discipline has been developed due to the importance of water quality issues,

and gradually changed into a well established field of research. The study of quantity of water alone is not sufficient to solve the water management problems because its uses for various purposes depend on its quality. In addition, a number of other researchers show that the hydrogeochemical characteristics of ground water and groundwater quality in different aquifers over space and time are important parameters in solving the groundwater management issues. This volume Hydrogeochemistry deals with quality, contamination, chemistry, chemical processes and reactions that take place in various groundwater systems. The purpose of the text is to present comprehensive and practical information necessary for treatment and interpretation of environmental hydrogeochemical data. It provides some baseline data on the geochemical characteristics of the sediments and the water quality. Natural origin of groundwater and groundwater pollution by anthropogenic activities is considered in the groundwater quality analysis for drinking water purpose. Hydrogeochemical processes such as dissolution, precipitation, absorption and desorption, ion exchange reactions and the

residence time along the flow path which controls the chemical composition of groundwater, constitutes the other issues that are dealt with in this book. Advances in our ability to quantify these processes will improve our ability to manage our water resources, help us identify potential sources of contamination, and illuminate potential solutions to water-quality problems. To better address societal needs, future advances will require a holistic approach to interpreting geochemical data.

This is the first English translation of the seminar Martin Heidegger gave during the Winter of 1934-35, which dealt with Hegel's Philosophy of Right. This remarkable text is the only one in which Heidegger interprets Hegel's masterpiece in the tradition of Continental political philosophy while offering a glimpse into Heidegger's own political thought following his engagement with Nazism. It also confronts the ideas of Carl Schmitt, allowing readers to reconstruct the relation between politics and ontology. The book is enriched by a collection of interpretations of the seminar, written by select European and North American political thinkers and philosophers. Their essays aim to make the seminar accessible

to students of political theory and philosophy, as well as to open new directions for debating the relation between the two disciplines. A unique contribution, this volume makes available key lectures by Heidegger that will interest a wide readership of students and scholars.

How will the world be able to feed close to 9 billion

people in 2050 and still maintain the ecosystems? In

this perspective, INRA and CIRAD launched the

initiative, in 2006, to develop a foresight project for

analysing issues pertaining to the world's food and agricultural systems on the 2050 timeline. This book provides a synthetic presentation of the main conclusions that this foresight project has yielded. First, it recapitulates the main statistical references for the period 1961 to 2003, before going on to describe the Agribiom simulation tool used to calculate food biomass resource use balances. Two scenarios on the 2050 timeline are then considered: Agrimonde GO is a trend-based scenario that bets on economic growth to feed the world, in a context where environmental protection is not a priority; in contrast, the idea in Agrimonde 1 is to feed the world while preserving its ecosystems.

Is the automobility regime experiencing a

transition towards sustainability? To answer that question, this book investigates stability and change in contemporary transport systems. It makes a socio-technical analysis of transport systems, exploring the strategies and beliefs of crucial actors such as car manufacturers, local and national governments, citizens, car drivers, transport planners and civil society. Two guiding questions are: Will we see a greening of cars, based on technological innovations that sustain the existing car-based system? Or is something more radical desirable and likely, such as the development of travel regimes in which car use is less dominant?

'[A] textbook specifically aimed at organizational misbehaviour. ...it certainly fills a gap... containing a large survey of academic literature on the subject. The book is good: it brings to light subjects which are too often neglected, and it provides an understanding of phenomena which are so common in organizations, but at the same time so vague and incomprehensible'

Organization Studies From 'soldiering' and absenteeism to humour in organizations and the emergence politics of sexuality, this book explores the latest forms of organizational subversion and offers fresh insights of the underlying dynamics of management and organizational processes. The book opens with a critique of orthodox organizational analysis and maps out the wide terrain across which organizational 'misbehaviour' occurs. The authors go on to examine the interconnections between identity formation, the pursuit of autonomy and organizational misbehaviour, and explore how clearly the tendency to misbehave is deeply embedded in organizational life.

This ambitious entry in R.P. Hunnicutt's 10-volume compendium of American tank history details the development of the Patton tanks, including the M60 series as well as other vehicles based on the tank chassis or employing other elements of the tank's design. First developed in the period between WWII and the Korean War, various iterations of the Patton armored military vehicle have served as a crucial component of American military operations in all manner of engagements. Hunnicutt spares no detail as he examines the origins and deployment of the M46 and M47 in the early days of the Cold War and for the duration of the Korean War. As the conflict escalated, increasing numbers of Patton tanks were deployed in Korea and many remained after the armistice to protect the tenuous agreement. Developed to replace the M47 Patton and M4 Sherman, the M48 Patton main battle tank boasted a variety of technical improvements and was relied upon heavily throughout the Vietnam

War, with over 600 individual tanks deployed alongside U.S. forces during the war. Hunnicutt provides detailed technical information about these vehicles and their role in the U.S. Army and Marines. The M60 product-improved descendant of the Patton tanks and its many variations is also treated with exacting detail by Hunnicutt, who takes us through the numerous and important variations on the Patton design. Spanning the history of America's most widely used main battle tank, Hunnicutt's "Patton" is an absolute must-have for anyone interested in the history of the American military. Richard Pearce Hunnicutt (1926-2011) enlisted in the 7th Infantry Division in 1944 and in 1945 was promoted to sergeant and awarded the Silver Star for his heroic actions. After WWII, Hunnicutt earned a Masters in engineering from Stanford University under the GI Bill. In addition to being one of the most respected metallurgists in California, Hunnicutt wrote the definitive 10-volume history of the development and employment of American armored vehicles. As a tank historian and leading expert in the field, Hunnicutt was one of the founders of the US Army Ordnance Museum at Aberdeen Proving Ground, MD and was a close friend and frequent contributor to

the Patton Museum at Fort Knox, KY.
